

Please do not allow there to be limitations on the content of satellite radio. We need competition in order to ever improve service in our country. Rather than prop up old technology, we need to embrace satellite technology. In the free marketplace of ideas everyone needs to have a voice. It would be wrong and unconstitutional to allow only certain people to give certain information (i.e. traffic and weather) over certain media. There needs to be a stepping down of content regulation and an allowance of freedom.
